

Impact of Information Technology with the Shift or Change of the World Order

Shuchita Gupta

Amass Weir

New Delhi, Delhi, India.

Abstract

Information Technology (IT) has become so integral to our lives. It is no longer optional. It has become a need, a necessity, required everywhere, every time. An IT war is happening all around us. People cannot have a healthy discussion by merely listening to information delivered by news channels, social media reels, YouTube videos, or other discussion platforms, because the information spread is not only fast but also immense.

Each one of us is overwhelmed by the information around us. A common person is unaware of how to filter, flag, or fact-check the information. There are theories, controversial stories, and “conspiracy theories”. Initially, conspiracy theories were dismissed by saying, “it is just a theory.” But we are witnessing a rise in these theories, and we are forced to ask if it is improving human life and humanity. Similarly, the world order is changing – The New World Order! These orders have been imposed by developed, powerful countries on the world.

It’s therefore important to understand:

1. Is the world order really changing or shifting?
2. IT evolved, expanded, and penetrated every aspect of people’s lifestyle. Was it well decided earlier, or is it a regular wave of IT?

This paper works to understand the IT’s impact on the new world order.

Keywords

Impact, Information technology, World order, Conspiracy theories, Social media, and Lifestyle 3.

1. Introduction

“Information” – transfer of a message that is communicated in a specific form, be it verbal or non-verbal, that delivers the message from one person to another. Information is not new. It is said to have been here since humans first appeared on this planet. As the years passed, information kept advancing, and so did human thought processes. This gradual growth of human information changed into communication, and eventually, what we see today is information co-joint with technology = “Information Technology” (IT). The progress in information technology we see in the world today is not only widespread but also uncontrollable.

Earlier, there were primarily three forms of information delivery through technology:

- (a) Television news with limited channels and time-bound
- (b) Newspapers are limited in information, and
- (c) Radio, with limited on-air channels and news that used to be delivered at a specific time of the day and was worth hearing.

However, now, we have:

1. Television – with too many channels, running 24*7, creating a paralysis of choice and selection.
2. Newspapers – now covered with information like bollywood, government advertisements, corporate branding, and more, taking precedence over general news.
3. Radio – Today, the channels on the radio keep the youth away from mainstream news and keep them entertained and engaged with less relevant information.
4. Social Media platforms – People have access to YouTube, which gives enough time to upload short-duration reels and short-form content, as well as long-duration videos like Podcasts/interviews, and online news. We also have Facebook, Instagram, Snapchat, etc., these are all platforms and many more spread the information in so many various directions that what is the correct information and what is incorrect in today’s world, is hard to justify.

On the other hand, opening a channel on any social media and telecasting anything has become so easy that, to decode information, we now have fact-checking channels and a full-fledged agency like Alt News (altnews.in, 2026).

The shift of information from regular channels to technology, i.e., digital, was never a regular or ongoing process. There was a set agenda by a group of people living in developed countries who took this process from communications to digital, and now digital is heavily imposed on people, whether in the form of communication, emotion, documentation, or transactions.

We cannot say the role of Information technology is less in shaping the world order, and now the world order is moving from its current state towards a shift or a change.

Companies like Microsoft, Meta, Facebook, SpaceX, Palantir, Amazon, IBM, NVIDIA, and many more tech giant companies that are controlling the IT and have changed the form of transferring information from pigeons taking letters to cloud systems today, and to the sub-sea cables. More to add, today we see various innovative, yet dangerous features of IT, like AI generations, have already started, Robots are taking away the jobs of laymen, even our handheld mobiles and digital equipment around us are dangerous for our lives, so is this all theories or some set of conspiracy theories that were there but are now in front of us by keeping all of us ignorant!

But how can we determine whether tech companies are controlling today's information technology and contributing to shifting or changing the existing world order? To understand this "controlled system" and determine whether it is a theory, a controversial theory, or a conspiracy theory, it is important to review studies and articles.

In an article published on Medium.com, Enrique Dans mentions that tech companies are stealing our data (Dans, 2025). The big tech companies do not own the "data". Data that flows on the internet is open. On the internet, we have various social media channels. On social media, various topics are shared and discussed. To those topics, people comment, discuss, post, and even share their thoughts and knowledge. This means the data is generated by people, and their thoughts are captured by tech giants for use as they see fit.

Dans's study also signifies that even "Google does not 'own' the data it indexes, and Meta, as much as it tries to, does not 'own' the photos, messages or thoughts that its users post" (Dans, 2025).

The concept of building the "World Wide Web (www)" was to circulate information globally and connect the world. But what we see today is that a theory that was set in front of all of us who saw the internet coming, developing, growing, and spreading in front of us, corporations that conspired

the system of the WWW made this concept controversial, and indeed everyone of regular human beings, be they from any sect or class, is today immensely dependent on the internet.

It has also come to light, through studies by renowned institutes such as Amnesty, that big tech companies, most of which are based in the USA, pose a significant threat to human rights. Big tech companies that were set to manage information technology and ensuring proper transmission worldwide took control of key areas like search engines, social media, e-commerce, and even our mobile phones at the time they were in production (Amnesty International, 2025).

Interestingly, social media has given the world easy access to its platforms and spaces. It is important to note that these IT giants are not charging us for their space and services. Whereas we, as laymen, have not only grown accustomed to but are addicted to using their platform, we spend our money recharging our internet, whether mobile data or Wi-Fi (Amnesty International, 2025). We, the users of IT, those who are educated and even those who are not, or less educated, would not even be aware of the recent and chilling development that Meta has become a key player in generative AI, and Google in cloud services. Hence, with such controlling mechanisms, based on our own information, it becomes hard to quantify how much of what we receive today is true and how much is false. In an open letter written by a Dutch politician, he mentions, quote "Our society is losing its grip on fact-based and pluralistic information provision due to the dominant role of global tech companies. This poses a serious threat to democratic resilience, as well as to strategic autonomy and, therefore, the security of the Netherlands" (TRT World, 2025).

As we all know, the tech giants are based in the USA, and the USA is often described as a superpower; it is easy to see who will manage the world order. The order created by capitalist economies towards the end of World War II (Arsad, 2025). This order was issued to maintain Western hegemony and to advance the interests of the USA.

Hence, it is very understandable where the concept of the New World Order comes from and why the change was imposed by calling it "Re-ordering" globally. But with this heavy term of "New World Order", there are questions that come, and it is important to answer these questions and find answers to the world's questions:

- (a) Why was the existing order of the world named “New World Order”?
- (b) Why did the requirement of “Re-ordering” the world order become a necessity?
- (c) What impact has information technology had in shaping the world order – New, re-order, or shift order?

In October 2023, wars erupted between Palestine and Israel, extended to Lebanon, and recently Iran, prompting significant U.S. arms investments.

This war is even fought with the latest AI technology and has been a testing ground for Israel's AI warfare (Duz, 2025). This means the strikes that were made on Gaza by Israel were not by humans; they were algorithm-based. With boots on the ground, Israeli's had fewer casualties, even though they were well equipped with arms and information technology, but the Palestinians and Lebanese innocents, who were unarmed, unprepared, and trapped, witnessed humongous casualties. After these wars, what we see is that the world shifted; the re-ordering of the world took a disastrous course of action, and brought another question to answer:

- (d) With wars around us and IT supporting the steps of war, where is the world order now – Shifting or Changing?

In the next chapter – Literature review, we will broaden the paper's scope and work on establishing relevance and moving closer to the answers to the questions posed in this chapter.

2. Review of the Literature

People now in their 40s and 50s have seen the era change. From the traditional way of information exchange by post or trunk calls, to the STD/ISD call booth, to the internet era. This generation can well understand the impact of information technology on them, their elders, and future generations.

People have seen text move from analog to digital transmission, and now it's from Artificial Intelligence (AI) to Generative AI (GAI). The transition of eras could not have been easy if this whole process had not been properly thought out, well-funded, organized, and implemented in the right order. But the question is whether the impact of Information Technology was necessary? Anyone who is now placed well in the ongoing system will say – Yes.

Indeed, the idea of spreading the information technology platform was a thoughtful one that was well implemented, but the way this IT is today, breaching our personal lives and time and space, was this required? Now, very

hopeful the reply will shift to NO.

So, why in the first place was this whole system made? Who gave consent to set the system? Was it planned or was it imposed? Can this set-up be said to be a part of “The World Order”?

To understand the impact of IT, we cannot see one side; we must roll our eyes 360 degrees. Today, nations trade to increase economic development, engage in bilateral trade, spread information and education, and even enhance national security. It’s because of this IT that we have been able to expand the World Wide Web (WWW) from limited places to everywhere at our fingertips.

Now, as this paper aims to understand the impact of IT and the New World Order, it is important to first define the “World Order” and explain its origins.

To begin with, let’s understand as per the following chronology of dates:

1. Beginning of Capitalism – 16th and 18th Century
2. Establishment of USA – 1607
3. Establishment of the United Kingdom – 1707 (through a series of parliamentary acts uniting England, Scotland, Wales, and Ireland)
4. Era of Industrial Revolution – 1760 to 1840
5. The Rothschild Family History: Origins back to the 15th century in Frankfurt (Rothschildandco.com, 2026)
6. Birth of Mayer Amschel Rothschild – 1744 to 1812
7. The Record of Business begins with Mayer Amschel Rothschild – 1769 (Rothschildandco.com, 2026)
8. Time Period of British Raj – 1858 to 1947 (period of direct British Crown rule over the Indian subcontinent)
 - **Start Event:** The Government of India Act 1858.
 - **End Event:** India and Pakistan's independence in 1947.
9. The Suez Canal building duration – 1859 to 1869 (by French diplomat Ferdinand de Lesseps – Trade route between Europe and Asia)
10. Era of Theodor Herzl – 1860 to 1904
11. Balfour Declaration – A Public Pledge by Britain – 1917 that aims to establish “a national home for the Jewish people” in Palestine, following the dissolution of the Ottoman Empire (Tahhan, 2018).
12. Era of World War 1 – 1914 to 1918
13. Dominance of the US Dollar in the World – 1944 after the Bretton Woods Agreement (Best, 2026)
14. Era of World War 2 – 1939 to 1945

15. Establishment of the United Nations Organization – 1945
16. The atomic bomb was dropped on Hiroshima and Nagasaki, and Japan formally surrendered, ending the WW2 – 1945
17. Establishment of the State of Israel – 1948
18. Soviet Union dissolved – 1991

By mentioning the above set of events and years, we can conceptualize the flow of major historical events that have brought us to the place and situation we are in. The Chronology of history reflects not only the establishment of major countries but also the major events that brought us to the world we live in today. The situational turnaround can be seen after the Industrial Revolution in connection with the Rothschild involvement (Dynastic Profiles, 2025). Rothschild, with a Jewish background, established the banking and financial family in Europe towards the end of the 18th Century. Before this, the rulings on major land matters Christians and Christianity made decisions, and taking any type of loan was prohibited. But Rothschild convinced and penetrated the Christian system and made use of the common loan. To relate Rothschild to capitalism, capitalism was established long before, when coins, instruments, and transaction notes were introduced by various countries and kings. Hence, it can be said that capitalism has continued to evolve since the 16th century.

This form of capitalism gradually gained prominence in commerce and became the lifeline of Civilization. This somehow laid the groundwork for the world order, and in this context, the USA emerged as a power. This power control was done in the year 1944 when the WW2 was going on, and the “Dollar”, the currency that was brought into the international monetary system, and forty-four nations agreed on the establishment of the International Monetary Fund and what became the World Bank Group. (Eichengreen, 2011)

It's after the establishment of these monetary agencies that we see the dollar become the world's currency, and the USA gained its supremacy after dropping a nuclear bomb in Hiroshima and Nagasaki, Japan, and ending the WW2.

Interestingly, in the list of chronology given above, it is clear and well manifested that Britain and Zionists made a base of various things and placed many things that we see happening around us to keep their control in their hand and to make a world order that was initiated in the early years of the 19th Century. Even the Balfour Declaration – “The statement came in the form of a letter from Britain's then-foreign secretary, Arthur Balfour, addressed to Lionel Walter Rothschild, a figurehead of the British Jewish community.” (Tahhan,

2018). Hence, it can be seen from the pattern of events in our history that, whatever changes in the world occurred, whether described as “World Order” or, going forward in the years, as “New World Order,” Zionist propaganda was well-structured within the world’s system. Even the WW2 that happened in history is also well connected with the fascist Zionists by setting up various parties and organizations in Germany and getting into the system of the German government, and were subject to the most rigorous persecution, with their officials and members behind bars in prisons and concentration camps (Polkehn, K). It can be said that various terms that float in and around us, from a powerful sections of people to the layman, are all spread by a strong information pattern by those who control the world system and its dynamics.

In today’s world, when we talk about globalization, finance capital, and climate change, and various national and international security threats, they are all connected by the information technology feature that a group of people has successfully set up.

Even if one talks about the rise of the West, wars, global politics, and anything one can think about the ecosystem of that particular feature has been well established and circulated to us by IT, and a new concept, which was recently indicated to us around the 1990s by U.S. President George H.W. Bush was the phrase of “The World Order” (Hadar, 2025). It is well established that the system around us is for a purpose, and what is happening around us is no longer a conspiracy. The way IT has been developed, the way the world has been digitized globally, and the way social media has been well embedded in the lives of every child from an elderly person, knowing its repercussions and making it a lifestyle status is not something that just evolved.

There is a strategy, a vision, and a mission that many IT companies are working on, creating an impact to keep people busy in technology rather than other personal or physical work, and conceptualizing it under the term “New World Order”. Next, we will explain the methodology used to develop this paper and present additional findings, from the global phenomenon on the chosen subject.

3. Research Methodology

The topic is vast and encompasses information that is not limited to a single state, country, or continent. The topic's reflection is global, and the concepts of “Information Technology” and the “New World Order” have been integrated into the world’s system almost in parallel. The paper is text-heavy, containing

inputs, suggestions, papers, historical perspectives, and opinions from various authors who contributed to making this paper using a conventional approach, and it has been kept as a conspiracy over the years. But eventually, what was below the carpet is now open to the world and is no longer a conspiracy at all.

In this paper, the research was conducted using various secondary sources. The reason for choosing a secondary source was that the topic is not only impactful and weighty for a certain elite group, but also more of a closed-door discussion. The keyword “The World Order” is not very commonly used in everyday life. This word was rather coined by an elite group of superpower nations, and then it was channelled to other countries primarily on a political front. Therefore, if any qualitative or quantitative research was planned for any industry within a country, there was a high probability that people would either avoid the topic in their discussions or not speak freely, or that they would not know about the concept at all. The research used is dual - conceptual and empirical. Basic study, experience of what is happening around, and various dynamics of observation were also required, as per the facts happening around us in the live conditions in which we live. The topic that was once a conspiracy is now open and happening around us yet is still minimally discussed. Therefore, extensive exploration and description of the information will be part of this paper. Secondary search will play a major role in the development of this paper. Various studies, authors, podcasts, YouTube videos, and reflections have been received from people around the world who initially called the happenings of today a conspiracy, how they have modified their statements, and much more. The paper will also examine how power dynamics in the world play out and how people living in developed nations are well played by developed nations in the next chapter.

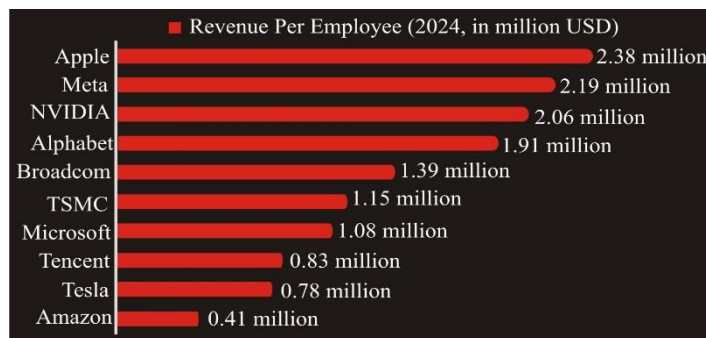

In the next focus will be on finding answers to the following questions:

- (a) Why was the existing order of the world named “New World Order”?
- (b) Why did the requirement of “Re-ordering” the world order become a necessity?
- (c) What impact has information technology had in shaping the world order – New, re-order, or shift order?
- (d) With the presence of wars around us and with IT supporting the steps of war, where is the world order now – Shifting or Changing?

4. Findings

With the evolution of industries over the years, from education, medicine, and automotive to national security, energy, finance, construction, and commerce, IT is everywhere today. In fact, the tech companies themselves have come a long way, and the tech war is best seen within them.

Earlier, there were a few names like IBM, Microsoft, Apple, and Samsung. Today, as tech companies have spread their wings, most people around the world doesn't even know what companies like Nvidia, Palantir, OpenAI, Anthropic, Salesforce, Google, and many more are doing behind the scenes for the world.

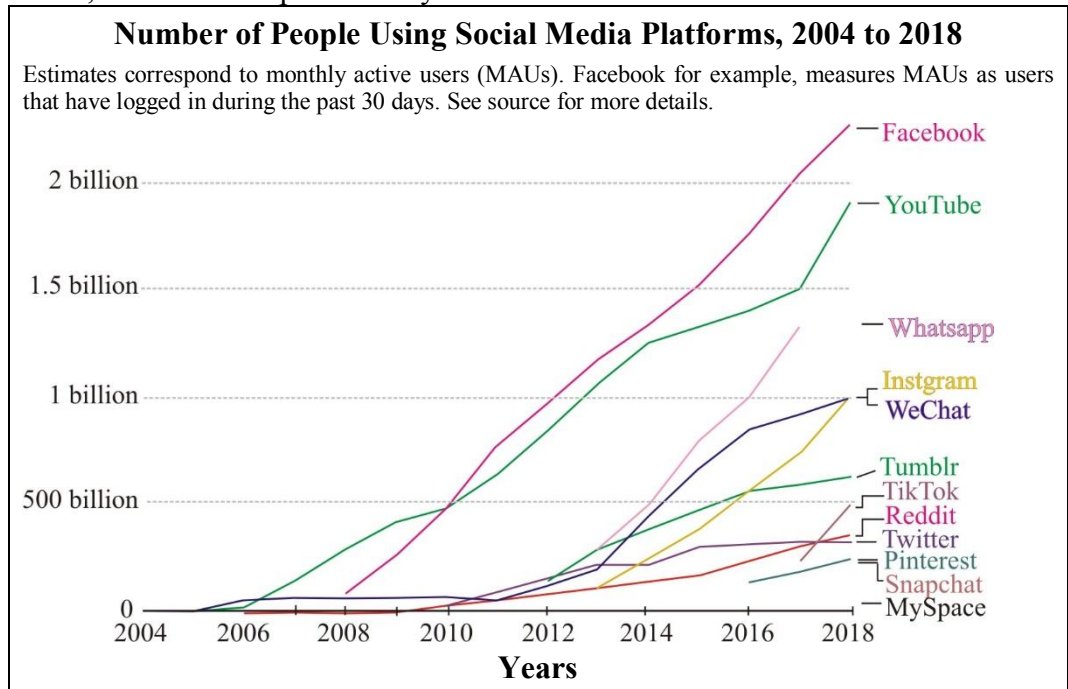

Source:- Ahmad, I (2025).

Chart 1:- Which Tech Giant Generate the Most Revenue Per Employee?

This shows that Apple employees' credibility is high, with 2.38 million, whereas other tech companies are also neck and neck in terms of service specifications. But how and when did these IT companies change the world's concept and become not only powerful but also a necessity for every human being, rather than a mere demand? Today, tech companies are the most financially healthy and successful companies in the world. After the dotcom bubble burst in 2000, the technology landscape changed drastically. In fact, we can also say it was a technological correction rather than a bubble burst. The reason is that soon after 2000, the era of smartphones began, and it took off so rapidly that today we see new phone versions in the market and in advertisements every day. By 2020, smartphones had even brought the internet out of specialized work sectors into the hands of every person. Interestingly, the steps of IT development were so synced and so well patterned that, be it a consumer, a layman, or the same tech company employee, realized how seamlessly they made their lives busy with

systems, the internet, and then the social media platforms that evolved after 2000, but became a part of daily lives and for all.

Source:- Hillyer, M. (2020).

Chart 2:- Number of People Using Social Media Platforms 2004 to 2018

The involvement and/or interference of technology has grown so significant that today human beings think less and search more. The reliability pattern for technology feeds has grown rather than the regular belief system. The world remained “Unipolar” for a long time, with the Dollar's dominance. The global control was with one nation, and that one nation was the USA, which not only had the dominance of major IT companies but also controlled countries the way it wanted. Which countries are to be kept in developed countries, which are all developing countries, and which are underdeveloped countries? What rules to put where, what orders to place where, placement of the world order, and, of late, change in the world order were also the USA's concept to the world. So, one cannot say that the order was there. Yes, there was a system, a system where people used to work together to achieve some goal or for some purpose. But the order is to organize things in a pattern that anyone likes. So, when we

say, “The World Order,” we mean a system controlled by a unipolar power that began setting the patterns the way it wanted.

As George Soros says, the world order has prevailed since the end of the WW2. That means the actual power of the USA emerged after WW2, and after it attacked Hiroshima and Nagasaki in Japan with the Nuclear bomb (Soros, 1993).

It is important to understand the way the complete system of the world has been laid by a group of people who are well controlling every aspect of an individual’s life, and are being dictated by the groups of nations as they have been bifurcated in –

1. Developed nation
2. Underdeveloped nation
3. 3rd world country knows everything. Whereas regular people get to know only what the people sitting at the top of the pyramid want us to know, the rest of the time they are working on their agenda, and we, the functional-level people, unknowingly keep doing their agenda work.

Before the transition from “The World Order” to “New World Order” is explained, it is also important to note that, since 1990, following the collapse of the Soviet Union and Yugoslavia, 34 new countries have been established, and 13 others have gained independence (Rosenberg, 2025). And, interestingly, it was the same year that the voice of the “New World Order” began to echo from the USA, with U.S. President George H.W. Bush.

It can also be understood that the “World Order”, when it came into existence to lay a foundational system for a group of wealthy people worldwide, wanted to establish, and that happened after WW2, when the USA became a superpower.

The dissolution of the Soviet Union and other major countries in the 1990s cannot be neglected, as it was also part of bringing the system into place, with the USA calling it our “New World Order,” and this too was again by the USA.

The concept of a new world order has gained greater validity recently as a description of the globalized world emerging from the multidimensional process of globalization. The intense global flow of goods, services, finance, people, images, and ideas has compressed the world by linking dispersed localities and people (Banerjee, 1994). If we look at the shift from the Old to the New World order, we see many systems controlling events. Technology, including IT, is advancing globally without rules, regulations, or strict laws. With the emergence of the New World Order, the world not only expanded with new

technologies such as Artificial Intelligence, but also saw an increase in unexpected and dangerous phenomena. This means the urge and need to implement what the group of powerful people controlling the world requires and to set the people's agenda right. This Old-to-New Shift in the World Order was forced to happen in such a way that they didn't even bother to start a war or mint money out of it.

After WW1 and WW2, the world has never relaxed; at various times, we have seen various killings and wars. And unfortunately, not only wars, but we saw many cyber-attacks, one country is doing on another, and the COVID-19 Pandemic also. We are in an era of great-power rivalry and shifting power balances (Menon, 2026).

To clarify and dig deep into understanding the impact of IT with the shift or change of the world order, the following questions were to be answered:

(a) Why was the existing order of the world named "New World Order"?

Eras changed, so the world changed, and its order was made to change. The whole system of change gradually evolved alongside IT over the years. From clashes between capitalism and Socialists to leftists. Over the years, when we talk about the New World Order today, we see it's more about war.

Wars with arms and ammunition, IT war, wars happening with AI, emotional war within people, and much more. Over time, what we see is immense distrust, delusion, misconceptions, and widespread false information, primarily spread by IT. There was a time when information was under government control. What to say, how much to say, was well maintained, but with the growth of technology and various information channels, determining which news is right and which is not has become a challenge and is no longer in the hands of the government. So, because a set system was in control of a few hands were wanted to expand its reach by various means and introduce new concepts to strengthen its system, they gradually began referring to the set system of world order as "The New World Order".

(b) Why did the requirement of "Re-ordering" the world order become a necessity?

The requirement of "Re-ordering" the world order was never necessary; it was made necessary for the world. This was all to flow an agenda of ruling countries and groups of people, spread everywhere and in every section of our lives. If we talk about technology, medicine, education, agriculture,

climate, or anything around us, the one thing that binds them all is money. Henry Kissinger, in his article "The Chance for a New World Order," notes that any financial collapse would deal a major blow to the United States, as America remains financially unchallenged amid the economic disruptions worldwide (Kissinger, 2009).

Kissinger, in his 2014 book "World Order," expresses deep concern about the rapid expansion of technology, which is breaking down barriers. Today, when we have recently seen the war in parts of the Middle East like Gaza, Lebanon, Yemen, Saudi Arabia, and Iran, it's the technology that has created a space of conflict (Kissinger, 2014).

If, on a conceptual note or, say, from a geopolitical and geographic point of view, it doesn't look like the world order system that has been laid out is going to reorder or change. Rather, it seems to be shifting from a capitalist system to a communist system. This is all well reflected in the ongoing situation of wars, where the American economy, arms and ammunition, and technology were used and have still been used by Israel against Gaza, the West Bank, Lebanon, Syria, Yemen, and Iran.

- (c) What impact has information technology had in shaping the world order – New, re-order, or shift order?

The era of information has evolved ever since. It's just that the technology, coupled with information and IT, gradually grew stronger. From the pigeon era to today's AI, the IT sector has grown so vast that it now covers all areas of business and even our lifestyles.

From televisions to mobiles, from lights to floors, from household mixi to Air conditioners, even the internet, which is everywhere, is so much a part of our surroundings that one cannot live without it now. IT has taken its place in our life just like food and water – the third element is IT.

As most of the IT companies are in America. Silicon Valley has become a geopolitical actor, attenuating America's power on the global stage (Misra, 2026).

After the recent events, i.e., wars, it is very hard to say for how long the Western world will be able to survive, whether the whole bubble it has created of being unipolar and a superpower will last, or how long it will take to vanish (Misra, 2026). For a simple reason: the diplomatic dynamics are not delivering properly to the world, leading to many problems between rich and poor countries.

- (d) With the presence of wars around us and with IT supporting the steps of war, where is the world order now – Shifting or Changing?

With the wars that started from Russia-Ukraine escalating towards Israel-Palestine, and other Middle East countries can primarily be seen as a war between Capitalist and Communist countries. Capitalist countries wanted to keep their hold strong, but this time in this era, with the help of technology, we saw many twists in wars.

The war that started in 2014 – the Russia-Ukraine war and the wars we saw later in the years was more of a hegemony and dominance of America. But in America, we see a powerful economy with a strong dollar; we also see China as a rival in development and trade (Acharya, 2025).

Also, the recent war between America, Israel, and Iran that lasted for 12 days in 2025 and for around 40 days in 2026, broke the bones of the American economy by not only breaking American bases in the Middle Eastern countries are also destroying their expensive assets. The bitter reality of capitalist countries came into existence, and what we see, today is that, rather than America being a unipolar country, we now have multipolar countries that have emerged as superpowers, like China, Russia, and even Iran. Hence, as the world is split into two halves, this time the initial half is on the verge of diminishing, while the other half is rising. This reflects that the Impact of Information Technology is shifting the world order.

5. Conclusion

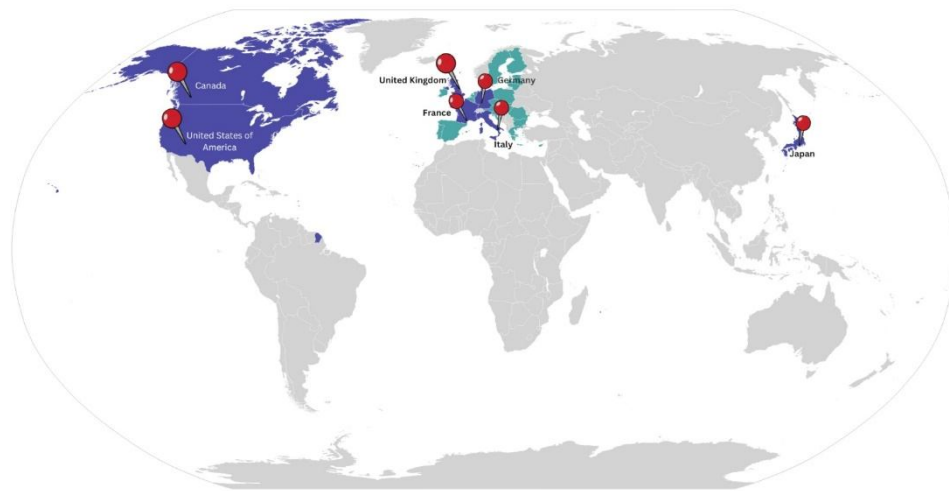

After conducting rigorous research on the topic, the order in the world was established to keep control and checks. Trade, monetary order, information technology, rules, and practices are a few such factors that were established worldwide and incorporated into people's lifestyles (Gavin, 2026).

After the establishment of the world order, the pattern of conquering others' land has not changed much either, by creating war to control others' land and resources, or by breaking nations into various parts. In both situations, historically and after WW2, what we know is that the USA had its lust to gain and be a superpower for years to come.

The Korean War from 1950 to 53, The Vietnam War (1959-1975), The Gulf War (1990-1991), The Afghanistan War (2001-2021), The Iraq War (2003-2011), and it continued since 1945, the Japanese war till the recent Iran war from 28th February 2026 till the USA raised its flag for the ceasefire (Ali, 2026). Interestingly, the USA even lost major wars that it created and led to the loss of

many innocent lives in its own country.

To keep the world busy, powerful nations have established certain groups of countries that not only decide how to set their countries' agendas, but also what to do and the strategies to advance those agendas. The G7 countries are Canada, France, Germany, Italy, Japan, the United Kingdom, and the United States. The G7 countries' purpose was to focus on internal matters, but Cold War politics inevitably entered the group's agenda (CFR, 2025).

Source:- rauias.com 21.

Figure 1:- G7 Countries

Similarly, the World Economic Forum (WEF) takes place every year in Davos, Switzerland. Here, leaders from around the world connect to discuss how to move the world forward together. For more than 5 decades, meetings among various countries have been held every year.

But from the IT point of view and from the World order's point of view, the recent wars between Russia and Ukraine, Israel and Palestine, and Israel-USA and Iran have changed the order of supremacy in a drastic way.

The powerful countries are working together to keep the agenda on track. Whereas the other group that has come strongly as a force to think and shift the power pattern of various countries is Iran, Russia, and China.

Source:- Yale Alumni Association.com.

Figure 2: Upcoming Powers - Russia, Iran, and China

Interestingly, after the recent 40-day war between the US, Israel, and Iran, the major reason why the shift of world order is highly reflected and why a small, sanctioned nation from more than 45 years looks in a winning position is also because of IT, which has been well used and was also the point target in this war. Whether the ammunition was from Israel, the US, or Iran, the information technology used in the recent war is seen to be precise and accurate, and indeed dangerous. This is all because the US wants more of the resources Iran has, and it wants to keep its power intact and controlled, as it controls the rest of the world, to change the order the way it wants; but the war with Iran shifted the entire pattern. Earlier, if any update happened in any nation, the message used to reach the world late, but today, with IT and the internet around, people globally saw many things and were updated and have started being updated at various levels.

Hence, the crux of the paper is that IT has had a major impact on the world's understanding. One must quantify its goodness and non-goodness. Also, with so much information circulating, the world's patterns and order are shifting the way we work and view the world.

6. Limitation

Indeed, the paper does have limitations. There is much to search, more to write. The paper laid the foundation for understanding how powerfully the powerful

nation(s) used information technology to spread their agenda, and no one knew how silently they were able to penetrate so many unwanted aspects of our lives that we now can't live without it. Today, social media and its platforms are everyone's favourite. Whether it is a child, a youth, or an elderly person, they are seen spending a good amount of time on various mobile channels. Rather than thinking, children and young people prefer to search on Google. Regular people, unnoticed, and countries developed their own groups, such as the G7, G20, SAARC, BRICS, and GCCI, and circulated what they wanted among their people. Be it laws or regulations, be it the United Nations or other UN organizations, be it USAID or NATO, this time the powerful nations made to overrule what was established ethically and with the consent of every nation that was part of these organizations.

This paper definitely has limits as covering every aspect with which the World Order was made to establish the factors where the developed countries were now working on changing the world order and bringing the "New World Order" was hence broken by Russia, Iran, and even by Palestinians who had nil to very limited resource in their hands, yet they were determined to live and die on their own land that countries like Israel, USA, France, UK, Germany, and UAE ever wanted it to be changed.

Also, there will remain a possibility of limitation in this topic and paper, because this is the superpower's agenda that was flown down, and when the controversial story that was said to be a conspiracy broke, people started questioning, and it was then that the reports and crack of their agenda happened, yet it got late. But it came into existence, and today it is all over.

However, on the World Order, if anyone asks or prepares a qualitative/quantitative questionnaire, there will be lots of grey areas within the talk because of a simple reason: the points of the agenda are still hidden and are in a tightly closed box, which is still in the custody of the USA and the powerful people's hands who are controlling the world's system.
